

# New from Prime Technologies

## The Fluke 754 DPC compatible Vibration Probe Precision Test Package

**This bolt-on module to ProCalV5 calibration management software is used to log data for linearity checks and calibrations of vibration probes.**

- Pre-configured test parameters can be downloaded into the Fluke 754 DPC
- DCV output readings from the proximity sensor can be automatically logged
- With uploaded data, the system performs linearity scale factor and probe deviation calculations, stores historical information and generates certificates and graphs.

**Other ProCalV5/ Fluke 754 DPC compatible test routines include:**

- Manual/Pass Fail
- Task List
- Switch Test
- Test Omission

For more information, contact your local Prime Technologies representative or sales at 484-266-0599.
