

PROCAL
V5

EXCEPTIONAL PRODUCTIVITY &
ACCOUNT MANAGEMENT BENEFITS FOR
FIELD SERVICE COMPANIES

BENEFITS OF USING PROCALV5

- Establish unique, autonomous accounts for each client. Easily launch recall and events due reports across a specific client account or all accounts.
- Create hierarchal associations within each account for systems, loops, equipment & instruments.
- Establish separate records for both client and service company test standards. Service company test standards can be assigned as global for selection of use across all accounts.
- Provides global manager & QA oversight with metric reporting over all accounts.
- Test standards can be controlled for use with only specific instrument types. Reverse traceability reporting is easy to launch across all client accounts.
- Create master instrument asset records with multiple test groups for a single asset (example: for mass flow – frequency, temperature & pressure).
- Schedules can be based upon calendar or usage count.
- ProCalV5 does all math functions when creating master records. Calculations can accommodate varying accuracy statements, resolutions and combinations (input vs. output, % of reading, range, +/-, manual, etc.).
- Templates can be established, records can be copied, global change features allow groups of records to be modified at the same time.
- No human error. The program verifies intolerance conditions upon as-found, as-left data entry. The system can be configured to allow automatic notification for non-compliance events.
- Specific test routines are available for more complex systems, devices and equipment. More can be created to your exact specifications.
- PM/Work order/Parts Inventory functionality.
- Electronic change control.
- E-signature approval routings.

- ProCalV5 has over 70 standard reports. These can be changed and more can be easily added to your exact specifications.
- Advanced queries can be constructed, named and saved for future execution. Results can be easily exported into other file formats.
- Generates calibration certificates and can auto print calibration stickers.
- Multiple assets can be calibrated, and individual records accessed at the same time
- Work in progress can be saved as incomplete.
- Mobile Workstations give technicians off-line access to the full program functionality (adds new records in the field, print certificates, print cal stickers, communicate with Fluke calibrators, etc.).
- ProCalV5 offers unmatched compatibility with Fluke documenting calibrators.
- No need to save MS Word docs or PDFs – WebView allows you and you clients ad-hoc generation of reports and certificates via secure web access.
- eView allows reports to launch automatically via e-mail on a scheduled basis.
- The ProCal Direct cloud version also works with Mobile Workstations and Fluke calibrators.
- Easily switch to other languages (English, Spanish, German, French, Italian & Brazilian Portuguese & more).
- For life sciences clients, this program is fully validated and 21 CFR Part 11 compliant.
- An integration option allows data sharing with SAP and other applications.
